

Prof. dr. dr. Andrea B. Maier (1978) graduated in Medicine at the Medical University Lübeck (Germany) in 2003 and registered as specialist Internal Medicine-Geriatrician at the Leiden University Medical Center (the Netherlands) in 2009. Contemporaneously she worked on translational research on ageing, defending her thesis on gerontopsychiatric-medical units in 2003 and on cellular senescence in 2008. Her research is driven by her passion to unravel ageing mechanisms and the interaction of ageing and age-related syndromes and diseases, which eventually leads to counteracting interventions. Her research group particularly focuses on sarcopenia and its influence on age related diseases. Since 2012 she is appointed as Head of the Section Gerontology and Geriatrics at the VU University Medical Center and the Amsterdam Center on Aging, Amsterdam (the Netherlands) and is full professor of Medicine, particularly Gerontology.
